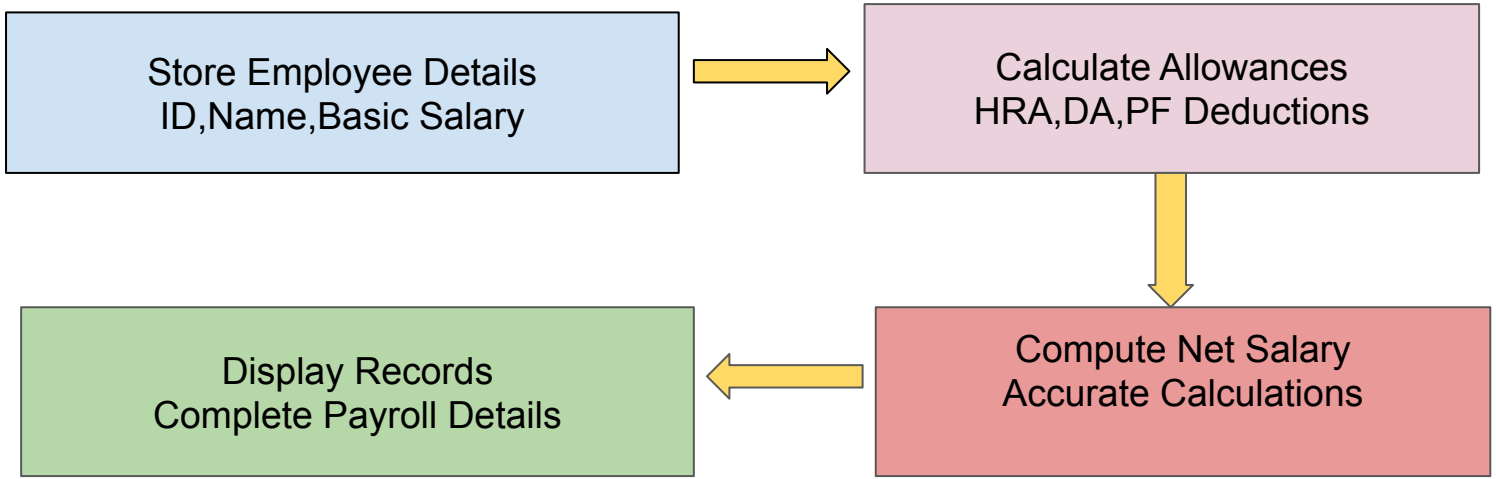
Problem Statement

The Challenge

Managing employee salary records manually is time-consuming and prone to costly errors. Organizations need an efficient system to calculate and maintain employee payroll accurately.

Objective: Implement a payroll management system using C++ that demonstrates classes, objects, and data management through programming logic.



Solution

Implemented using **Object Oriented Programming (OOP)** in C++. The Employee class stores details and calculates payroll efficiently.

Employee Details Stored
Employee ID
Employee Name
Basic Salary

Payroll Calculations
Program automatically calculates
HRA(House Rental Allowance)
DA
Deductions
Net Salary

Formula:Net Salary=Basic Salary+HRA+DA-Deductions

Working Method

Enter Employee Details

Calculate Allowances

Apply Deductions

Calculate Net Salary

Display Results

Conclusion

Key Concepts Applied

Classes and Objects

Functions for Calculations

I/O operations

Salary Calculation Logic

Advantages

Reduces Manual Payroll Systems

Faster Salary Calculations

Organized Employee records

Future Improvements

Add multiple Employee Records

Store data using file handling

Create GUI based System
